In this presentation, we report on more detailed evidence that shows self-similarity in the *Hands, Head and Heart* (3H) framework (Tan et al., 2021) for curriculum review. We describe two examples where the framework was validated: (a) pre-service teachers' surveys and (b) meeting transcripts between the committee members. The analysis of the data uncovered both the interactions and the self-similarity of 3H domains, both of which are the key features of the 3H framework.
